

CALIFORNIA LCFS: WHAT TO KNOW

DID YOU KNOW?

Your existing fleet of electric material-handling equipment (eMHE), cargo-handling equipment and hybrid refrigerated units can earn your company incentives through the California Air Resources Board's (CARB) Low Carbon Fuel Standard (LCFS) program. With zero change to your operations, you can start generating incentives to help offset the cost of charging and maintaining your equipment or you can fund new sustainable initiatives.

HOW IT WORKS

States such as California and Oregon create clean fuel programs to reduce greenhouse gas emissions in the transportation sector.

Owners and operators of electric fleets generate credits by charging their equipment and increasing the penetration of electric equipment in their fleet.

Credits are sold to regulated entities that must offset deficits they accrue from the sale and production of high-carbon fuels to be in compliance with regulation.

Owners and operators of electric fleets continually earn revenue from these transactions which they can reinvest in their electrification efforts.

ANNUAL LCFS ESTIMATES

\$10,000

SMALL FLEET

(100,000 kWh)

\$32,000

MEDIUM FLEET

(300,000 kWh)

\$50,000

LARGE FLEET

(500,000 kWh)

Estimates are based on a 2-shift-per-day, 6-day workweek schedule. Estimates will change based on equipment type, make-up, and market credit prices. For a custom estimate on your fleet, please contact an eMC representative today.

QUALIFYING EQUIPMENT

- Forklifts
- Pallet Jacks
- Order Pickers
- Walkie Riders
- Reach Stackers
- RTGs
- Yard Trucks
- Top Handlers
- EV Charging Stations
- Buses
- Heavy-Duty Vehicles
- Commercial Light-Duty Vehicles
- eTRUs
- Drayage Trucks
- eOGVs

WHY CHOOSE E-MISSION CONTROL?

e-Mission Control (eMC) Free Credit Estimate

We provide free, preliminary incentive estimates based on actual fleet and energy consumption information. If you would like a free evaluation of your fleet's LCFS or CFP value, contact us today.

Zero-Emission Energy Procurement

As part of eMC's service offering, we procure zero-emission electricity for our entire portfolio. The use of zero-emission electricity generates approximately 20-30% more credits than grid-based electricity.

My-eMC Portal and Data Access

eMC has developed proprietary software to streamline and automate all aspects of the LCFS and CFP programs. This software makes it easier for you to access relevant information such as your quarterly incentive summaries and payment volumes, contracts, facility registrations, approval statuses, current fleet assets, and a host of other helpful guidance.

eMC Partner Success Representatives

Each partner is assigned a Partner Success Representative who jumps into action once your program enrollment is complete. Your eMC rep works closely with your team to ensure satisfaction and long-term success.

Installation of kWh Metering Equipment

Planned directly with your team, eMC can install non-invasive kWh metering equipment on-site to facilitate access to needed energy consumption data for equipment requiring metering. If this service is required, it will be at no cost to you.

Green Fleet Pioneer Program

We view our partners as "Green Fleet Pioneers (GFPs)" and supply them marketing tools to communicate the importance of their participation in clean fuel programs. GFPs receive a program logo they can use on marketing assets, pre-built social media posts, a press release and stickers for their fleet. Green marketing made easy!

e-Powerment

The e-Powerment Program is an eMC initiative which helps non-profit organizations in California and Oregon fund electrification projects. e-Powerment is made possible through the donations of generous eMC community members via their own Low Carbon Fuel Standard (LCFS) or Clean Fuels Program (CFP) revenue.
